Product information

Available in:

Self-supporting, internal screw cap: 2 & 4 ml

Free-standing, external screw cap: 2 & 5 ml

External screw cap: 0.5, 1 & 2 ml

Cryogenic Vials

Cryogenic vials are made of high-transparency polypropylene material with excellent chemical resistance, suitable for storage of biological samples such as cells, specimens, solutions, etc. in ultra-low temperature or liquid nitrogen environment.

Our advantages

- Working temperature: -196°C to 121°C , can withstand high temperature and high pressure.
- Leak-proof screw cap to ensure the safety of the sample inside the tube.
- The maximum fluid volume is 80% of the maximum scale.
- The bottom edge is designed for easy one-handed operation.
- Different color caps, easy to distinguish samples.
- No DNase, RNase, no pyrogen, no endotoxin.
